Professional Summary

Senior Java Backend Engineer with 4+ years of experience designing and scaling distributed, event-driven backend systems for enterprise CPQ platforms. Proven expertise in microservices architecture, Kafka-based integrations, performance optimization, cloud-native deployment, and large-scale platform modernization. Led Java 17 migration initiatives, latency reduction programs, and developer productivity improvements while mentoring engineers and driving technical excellence. Experienced in agile teams across the full software development lifecycle. Seeking a challenging role to leverage technical expertise and contribute to innovative projects.

Professional Experience

Amdocs - Software Developer

Enterprise CPQ Platform | Pune, India | July 2022 – Present

- Owned end-to-end backend development and optimization of the platform, working across requirements analysis, system design, API development, testing, CI/CD deployment, and production support, improving platform stability and reducing post-release defects by **15%+**.
- Led the migration of the application from **Java 8 to Java 17**, identifying and resolving **100+** deprecated APIs and compatibility issues across **20+** modules, while maintaining CI/CD pipeline continuity and enabling zero-downtime deployment.
- Designed and optimized scalable REST APIs using Java, Spring Boot, Hibernate, Redis caching, and connection pooling, improving API response times by **20%+**.
- Improved backend performance through JVM analysis, GC log inspection, thread dump analysis, asynchronous processing, and database optimization, reducing average request latency by **25%+**.
- Designed and implemented event-driven integration architecture using Kafka, defining partitioning strategy, DLQ handling, and consumer-group scaling to improve reliability and reduce quote-to-order processing time by **30%**.
- Debugged production issues across distributed services by analyzing logs, API failures, Kafka message flows, JVM behavior, deployment issues, and database bottlenecks.
- Provided technical leadership for a team of 4–5 engineers through architecture reviews, code quality initiatives and production incident support improving engineering productivity and consistency.

Skills

Programming: Java, Spring Boot, Object-Oriented Programming (OOP), SQL, NoSQL, Data Structures and Algorithms (DSA)

Backend & Architecture: Distributed Systems Design, Event-Driven Architecture, Microservices Architecture, REST API Design, Scalability & Performance Optimization, Cloud-Native Backend Development

DevOps & Tools: Apache Kafka, Kubernetes, Amazon Web Services (AWS), Jenkins, CI/CD, Git

Languages: English, Hindi, Telugu, Odia

Projects

Professional Projects

HelmPilot — OpenShift Deployment Automation Platform

- Built a self-healing MCP server automating multi-cluster OpenShift deployments via Bitbucket integration, reducing deployment time by **90% (10 min → 45 sec)**.
- Added namespace disambiguation, multi-repository fallback, and safety checks to prevent misdeployments across enterprise Kubernetes/OpenShift environments.
- Automated repetitive deployment workflows across repositories and namespaces, improving developer productivity and release reliability.

Tech Stack: Python, MCP Framework, OpenShift, Kubernetes, Bitbucket

CPQ Plugin — Dev Productivity & Debugging Tool

- Built an internal browser extension to automate Keycloak authentication across **4+** user roles, reducing repetitive login time by **80%**.
- Integrated tracing APIs to convert multi-service request flows into UML sequence diagrams, improving root cause analysis for distributed CPQ workflows.
- Added hover-to-preview autofill, bookmarked environments, and instant trace visualization to simplify recurring development and QA debugging tasks.

Tech Stack: JavaScript, HTML, Tracing APIs, GitHub Copilot

Personal Projects

Battle Tanks — Browser-Based Multiplayer Artillery Game

- Built a browser-based 2D artillery game with turn-based gameplay, projectile physics, wind, gravity, destructible terrain, scoring, and 30 weapon types.
- Implemented campaign mode, CPU opponent logic, weapon drafting, custom game settings, responsive Canvas rendering, and synthesized audio effects.
- Added online multiplayer using PeerJS/WebRTC DataChannels with room-code hosting, seeded game synchronization, and turn-based state exchange.
- Deployed the static web app on AWS S3 and CloudFront CDN for HTTPS-enabled global delivery.

Tech Stack: JavaScript, HTML5 Canvas, CSS3, Web Audio API, WebRTC, PeerJS, AWS S3, AWS CloudFront

Certifications

- **Agentic AI Certified Foundations Associate** - Oracle University
Issued: Jul 2026 – Expires: Jul 2028
- **AI Database Certified Foundations Associate** - Oracle University
Issued: Jul 2026 – Expires: Jul 2028
- **AWS Certified AI Practitioner** - Amazon Web Services
Expected Completion: Aug 2026 (In Progress)

Education

National Institute of Technology Calicut, Kozhikode, India.

Aug 2018 – May 2022

- B.Tech in Electronics and Communication Engineering
- GPA: 7.45/10.00

Coursework: Data Structures and Algorithms, Artificial Intelligence, Electronics, Communication Systems.

Accomplishments

- Recognized as the 'Employee of the Month' multiple times within the CPQ project of Amdocs.
- Secured the 1st prize in Digimania held as part of Tathva '18 at NIT Calicut
